Collagen Joint Care

Contains 1 ounce scoop

Easier Range of Motion & Flexibility

Collagen is the major structural protein in human and animal bone and skin tissue.

With daily supplementation you can greatly improve the joint health of your horse. For years humans have been experiencing the health benefits of collagen supplementation for arthritis and other joint disorders. Now your horse can receive the same benefits.

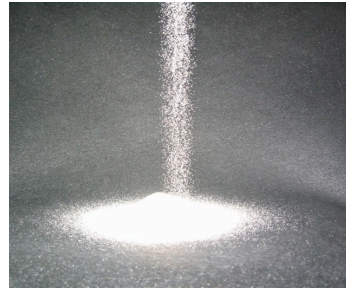

GATCO COLLAGEN is the highest quality available. There are no additives or fillers, just 100% pure collagen. No matter what kind of horse you have or what kind of work he does for you, he will do it better without joint pain. Older animals will especially thank you. Just like us, as they get older, arthritis starts to set in. Collagen will also help with hoof health, and their coat will never look better.

As with all animals, the feed amount is based on body weight. For every 1,000 pounds of body weight we recommend 2 ounces per day. If your horse is on any type of pain medication you may be able to reduce or eliminate it after 3 to 6 weeks of collagen supplementation. This has been the case in the human population. Please consult with your veterinarian on this.

This product is intended for supplemental feeding only.

What is Gelatin?

Gelatin is a product obtained by the partial hydrolysis of a collagen derived from beef hide collagen.

The Amazing Protein

When added to your horse's diet, it delivers a high quality supplemental source of protein. Gelatin is used for the growth and development of the hoof in much the same way as in human fingernails.

Gatco Gelatin

"Gatco Gelatin" recommended feed rate is 4 ounces per day per 1,000 pounds of body weight.

Gatco brand contains no fat or tryptophane. It is 100% pure gelatin with no fillers.

Gelatin PLUS Biotin

The addition of Biotin makes an excellent complement for hoof, skin and coat nutrition. Biotin helps the absorption and utilization of the amino acids in gelatin as well as the vegetable proteins in hay, corn and other feeds.

The recommended feed rate of **"Gelatin PLUS BIOTIN"** is one ounce per day per 1,000 pounds of body weight.

"Gelatin PLUS BIOTIN" contains 15mg of biotin per ounce. The optimum level of biotin supplementation depends on the body weight of the horse. The following levels are expressed in milligrams per day: Ponies 5-10, riding horses 15, heavy work horses 25 - 30.

It is essential to continue an adequate supply of biotin for proper hoof maintenance.

In over 20 years of business, **Gatco Products, Inc.** has dedicated itself to offering you, and your investment, the highest quality **Collagen, Gelatin and Gelatin with Biotin** food supplement. It is our experience that when used on a regular basis, you will see a noticeable difference in the health and mobility of your horse.

Healthier hoofs, softer coat and easier joint motion is our goal.

Please consult with your veterinarian prior to administering. This product is intended for supplemental feeding only.
