## **Test Methodologies**

We follow the Official Procedure of the Gelatin Manufacturers Institute of America, Inc. 1986 for all Bloom, Viscosity, pH, ash, and moisture tests.

We use the most current USP/NF methods for all-microbiological and chemical testing of our gelatin. The only exceptions are for Sulfur Dioxide, which uses the Monier-Williams AOAC 990.28 method, and for Arsenic, which uses the AOAC 993.14 method. Both of these methods are more accurate.
